SEDILI COPRI WC
TOILET SEATS

PROUDLY ITALIAN

expect the unexpected

We are proud to present our new catalogue.

Welcome to our world of toilet seat covers.

It seems an insignificant item, sometimes we are even shy to speak about our seat cover.

But, as you well know, it is a very important component of our daily life.

Our commitment was always to produce a comfortable sitting seat, easy to clean, practical to use and adjustable to the different needs.

We managed a lot in the few years of our activity but our laboratory keeps researching new solutions to better satisfy the daily necessities of our users.

Particular attention was dedicated in these years to the assembling and hinging systems.

New solutions are proposed in this catalogue.

Among our line of products you will certainly find what you are looking for.

But we promise to continue our research and to remain innovative

SoftClose

The SoftClose automatic closure system adds a new dimension to WC comfort. The SoftClose automatic closure system finally puts an end to noisy closing WC seats. Just a fingertip touch and the lid closes all by itself. Gently and silently. Almost weightless. By the way, installing a WC seat with SoftClose automatic closure is just as simple as using it. And its reliability is beyond doubt

Take off

A hinge with TakeOff function ensures perfect hygiene. Installation is quick and simple: Fastening the seats to the hinges does not require special tools. The seats are simply slipped on and pulled off the TakeOff® hinges for perfect hygiene.

Antibacterial

An antiseptic additive is added into the raw material. This ensures that the toilet-seat has durable, out-and-out, antibacterial effect. Its protection resists scratches or repeated cleaning. The material is environmentally friendly and soft to your skin. Studies and tests from the University of Milan confirm the positive antibacterial and fungicidal effect. Antibacterial Wc seats are ideal for use in public buildings, hotels, medical areas and everywhere, where a high standard of hygiene is required

Adjustable

Nearly all hinges are adjustable in height and in all directions. This enables an exact fit of the WC-seat on the bowl.

Save your time

Locked joint and firm connections reduce the fixing time by about three quarters. Washers level out any unevenness. The size allows installation also if there is only very little space on the underside of the ceramic. Spacer rings from our spare parts set prevent axial play.

antibacterial duroplast

antibacterial duroplast

standard duroplast

A toilet seat comes in contact with the skin and it is therefore highly desirable for the seat to provide a reliable antibacterial and antimould protection. And this is exactly what our Antibacterial range of seat offers. The materials used for the seat contain silver additives throughout seat profiles, providing thus a long-term barrier to bacterial growth.

quality materials

Colour ingrained

Scratch proof

Easy to clean

All our seats are colour ingrained and made of duroplast with a particularly scratch proof surface. This provides an incredibly durable seat that can endure the wear and tear of everyday life. Should an accident anyway occur, it helps that the seat is colour ingrained; i.e. a possible scratch cannot be seen.

Urea (Duroplast)
This high-performance material with the look and feel of ceramic is the ideal material. It is a highly break-proof Duroplast with an extremely hard surface that is resistant against scratches, cigarette burn marks, UV light and aggressive cleaning products and disinfectants. Even after years of use, Urea loses none of its shine.

IVP Seats contain no environmentally hazardous substances and are therefore skin-friendly.

Duroplast WC Seats are resistant to cigarette burn marks.

Duroplast WC Seats are resistant to fading under UV light.

Duroplast WC Seats are resistant to scratches under normal household conditions.

WC Seats are antistatic and dust repellent.

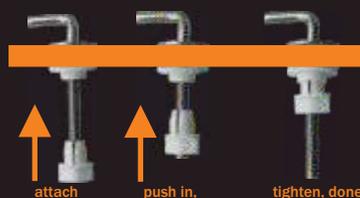

C1
Round-based adjustable
nylon hinge with steel screw.
Adjustability cm. 2,3

C2
Steel fixed hinge with fast
plastic wing nut (screw length
cm. 6,5).

C4
Soft Close Take Off hinge with
Vario speed system. Contains
oleodynamic cartridge integrated
in the hinge's body, the seat and
the cover can close slowly, with
no intervention by the user.

C6
Square-based adjustable
nylon hinge with nylon screw.
Adjustability cm. 1,5

C3
Steel adjustable hinge with boss.
Adjustability cm. 2,2 cm

C5
Soft Close - cost-efficient alternative
plastic buffers reduce the price
but not the reliability. Long-term
tests have shown that they
withstand the same stress and
strain as the stainless steel
version.

quality control

The high strength and resistance of the most smooth surface against mechanical damage is a guarantee of longevity, hygiene and easy cleaning. The color stability and natural shine complement look of vitreous china improving the look of the set. The IVP duroplast seats are very strong and resistant. We regularly subject them to test up to 300kg.

Quality control is done on two stages. First stage is done by the worker on press machine or injection press after every cycle. They put stamp on every each part with his name and date. Second stage is done in final assembly by worker who control complete product one more time. This double control process together with control of raw material allows us delivery high quality product.

Quality Control and TQM

colour overview

Who says a toilet seat cannot be coloured?

With us you have the maximum opportunity to make your own and personal choice. Find a theme, choose a colour and use it so the decoration of your bathroom flows together.

in house mold production

CAD/CAM solutions address the entire mold making process—from data entry to design, applying engineering changes, NC and EDM programming. Nothing is lost in translation, so you we deliver higher quality tools at lower cost and shorter cycle times. CAD/CAM solutions save mold makers time with high level of automation, while empowering the experienced user with full flexibility to control the entire process

This advantage enables our company to deliver more quality product because we do all work in one house - no third party suppliers. We are supplying various sanitary ware producers with custom design seats. We have outstanding expertise in the development of toilet seats. Furthermore, we can assist you in designing your own package, having your logo engraved and other graphic developments.

soft close function

Let yourself be surprised by the silence

Soft Close means controlled seat fall: thanks to a special oleodynamic cartridge integrated in the hinge's body, the seat and the cover can close slowly, with no intervention by the user. Laboratory testing showed a correct working of the cartridge even after long periods of time, guaranteeing at least 50.000 opening / closing cycles: this shows how extremely reliable and durable the product can be, also in stressful environments (public places, hospitals, communities). Soft Close is a simple device enhancing the value of the bathroom: for example, this mechanism can prevent unpleasing domestic incidents, especially when there are children around who can hurt their hands with a normal toilet seat. The positive feedback achieved so far led IVP to develop a set of soft close hinges also for the thermosetting toilet seat: in this case, the cartridge can be directly incorporated in the toilet seat itself, making the aesthetic impact of the soft close system even less relevant.

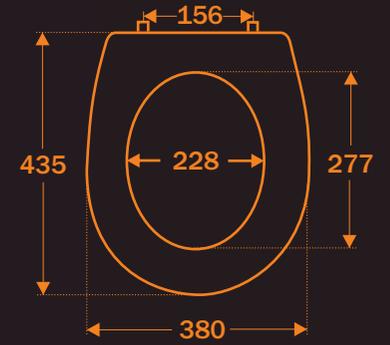

The oleodynamic cartridge integrated in a Soft Close

- Tested in long-term tests
- Smooth and steady running – no slip-stick effect
- Fully integrated in the seat – hard-wearing
- Silent – no risk of friction sound
- Easily removable through TakeOff hinges
- Maximum hygiene – no dirt traps
- Easy to install
- Secure fixation of all components
